

# **Linking farmers' perception of biodiversity, subjective well-being and conservation in the Tandilia System in the Southern Pampas of Argentina**

**Mara De Rito, Alejandra Auer, Claudia Mikkelsen, and Lorena Herrera**

## **Appendix**

The interview included questions associated with the characteristics of the farmers and the farm, perception of biodiversity, subjective well-being and management practices:

Age:

Self-perceived gender:

Level of instruction attained:

Type of production system (conventional, organic, other):

Farm size:

What type of use do you give to the sierras on your farm?

Link with the farm (owner, tenant, administrator, other):

Are you currently living in the establishment? If the answer is no, where do you currently live?

Could you tell me what you understand by biodiversity?

Do you think that the different agricultural activities produce changes in biodiversity?

Do you consider it important to protect biodiversity? Why/not?

Do you consider that your management practices favour the care of natural environments and biodiversity? Why/not?

Would you be willing to make changes in your management practices to adopt more sustainable practices?

What makes you happy about working and/or living on the farm?

If you have children, nephews, grandchildren, would you like them to continue with your work?
